

MAKE MAP PLANS— Dale Berg (R) Wasatch County Planner, discusses resource map overlays with Gary Jones (c) State Department of Community Affairs, and Dr. Theron Hutchings (L), Soil Scientist, U. S. Soil Conservation Service.

Planning Maps Being Made for County Board

Soil, water, vegetation, wild-life and recreation maps are being developed by the Wasatch County Planning Commission. These will be used to guide land use recommendations within Wasatch County, reports Russell Wall, County Commissioner. This inventory information about our resources is also being used in the Wasatch County long range plan.

Dale Berg, Wasatch County planner, discussed the progress of this model environmental study with the Mountainland Rural Development Committee; Gary Jones, representative from the State Office of Community Affairs and Curtis Muir, Wasatch Soil Conservation District.

Gary Jones commented that the Wasatch project is a model for this state. When completed,

other counties will surely want to review what Wasatch County has done. This is the first time various elements influencing our environment and our natural resources have been brought together for comprehensive planning, Jones stated.

Moratorium Meeting Is Thursday

20 Apr 1972

Tonight at 7:30 P. M. in the Wasatch High School Civic Auditorium, the Board of County Commissioners will hold a public hearing on a proposed moratorium on all future subdivision and commercial development within the unincorporated areas of the County.

The Wasatch County Board

of Health and the County Planning Commission have recommended that the proposed moratorium last for 90 days in order to give them time to complete their ongoing investigations and studies of the health, safety, and welfare of the County.

It is believed by the sponsors

of the moratorium that if present development trends and conditions are permitted to continue, such development trends and conditions will irreversibly destroy that environment which the people of Wasatch County value and seek to enjoy. If these conditions are not more adequately controlled, they will

create present and future, health, safety, and welfare problems in the County that would be extremely expensive to correct.

All citizens are invited to attend this hearing and voice their concerns.
